

Press release

NOVEXX Solutions presents the new industrial label printer XLP 60x

Industrial label printing in perfection: the new XLP 60x

Eching, January 2022 – Label printing without limitations: With the new XLP 60x, NOVEXX Solutions presents an industrial label printer that not only impresses with its exceptional print speed and excellent print quality but is also more adaptable than any other due to its various configurations. But that's not all: thanks to multiple data interfaces, the XLP 60x also meets the newest digital requirements.

The XLP 60x high-performance label printer is the perfect solution for any industrial printing challenge. Due to the choice of two different displays, numerous options and several configurable interfaces, you can customize the perfect label printer for your requirements. With thermal transfer or thermal direct printing and a print resolution of 300 dpi, the XLP 60x is capable of printing high-quality labels for products, cartons or pallets in the shortest possible time. User-friendly features such as an intuitive menu navigation, quick and convenient change of label and ribbon material, a web interface for remote access and configurable printer options make the XLP 60x the perfect label printer for any demand.

No matter which printer option the customer chooses for the XLP 60x, these benefits always apply:

Excellent print performance

The XLP 60x delivers first-class print quality at high print speeds of up to 16" (400 mm) per second. Easy-to-use ribbon mandrels ensure stable ribbon tension – for optimal print results.

Maximum user-friendliness

The choice of two different displays, each with intuitive navigation, the quick and convenient change of label and ribbon material as well as 100% tool-free maintenance offer maximum comfort for the operator. In addition, the open print module makes cleaning extremely easy.

Maximum uptime

The industrial robustness of the XLP 60x together with 100% tool-free maintenance and large ribbon capacity ensure maximum uptime and increased productivity.

Increased sustainability

The Ribbon Save Function ensures that only the ribbon needed for printing is used. The result is less waste and chemicals, reduced costs and a longer print head lifetime.

Intelligent printing

The XLP 60x meets the newest digital requirements: The webinterface enables remote access and configuration from any PC or via mobile devices, such as smartphones and tablets. Optional I/O boards ensure multiple interfaces for any kind of automated print & apply applications.

Various options – the right choice for any application:

The XLP 60x can be ordered with a range of options to meet a variety of requirements:

- With the cutter function, labels are cut precise and reliable. Individual setting options determine whether cutting takes place after each printed label or a batch of labels.
- The electrical, airless applicator LTMA creates a semi-automatic print & apply labeling solution for products with sensitive surfaces and varying product heights.
- With the easy to install external rewinder, the printed labels are wound automatically and can be further processed with any labeling system.
- The dispenser and internal rewinder solution prints and dispenses labels while automatically collecting the backing paper inside the printer.

"With the XLP 60x we have an industrial label printer in our portfolio that truly has no limits", says Geert Jan Kolkhuis Tanke, Director Product Management at NOVEXX Solutions. „It impresses with an extraordinary print output per minute combined with first-class print quality and is equipped for any industrial label requirement thanks to its numerous options and interfaces."
