

Press release

Multifunctional labeling system ALS 209 completes the product range ALS 20x

New, wide, robust. OR: IN A NEW DIMENSION.

It is a great relief for manufacturers from the chemical industry, the building materials and the cosmetic industry: The new multifunctional labeler ALS 209 from NOVEXX Solutions applies labels with a very large width – it is particularly flexible even in harsh environments. In combination with the optional tandem function, it is guaranteed that there will be no more down times when changing consumables.

Eching, 30 November 2015 - whether it is tubs, barrels, large containers, drums or packaging for personal care products – the new labeling system ALS 209 from NOVEXX Solutions will win you over with its labeling of a wide variety of products. With the new equipment, the specialist for industrial labeling and identification completes its proven 20x family.

The ALS 209 provides manufacturers especially from the chemical and building industry and companies in the personal care sector, with an economically profitable solution for attaching particularly wide label formats. Because the ALS 209 enables the application of **labels with a width of up to 229 mm (9 inches)**.

The multitalented ALS 209 scores high with even more attractive advantages:

Versatile: Whether it is for decoration, information or branding labels, from paper or plastic: ALS 209 processes quality labels for various areas of application in the chemical and building materials industry as well as the hygiene sector.

Robust: The optional IP 65 additional function protects the ALS 209 from dust and moisture. For that reason, it is suitable for the harshest environments and it requires minimal down times for waiting and maintenance. The compact industrial housing and the highly durable components facilitate a permanent industrial application.

Flexible: The ALS 209 processes labels with a width of up to 229 mm as well as a length of up to 600 mm. The various optional dispensing edges – suitable for almost every application and diverse sectors – enable the application of the labels on almost all packaging shapes, no matter if they are above, below or at the side. Furthermore, due to its compact shape, the ALS 209 can be easily integrated into the existing production environment.

Reliable: The dispensing speed amounts to 25 m per minute and that is 24 hours a day, seven days a week. The possibility of a tandem function ensures a continual labeling and hence it avoids down times – the production time is maximised.

Precise: The APSF functionality ensures that the labels are always applied accurately and precisely and in particular in the case of changes in speed on the conveyer belt. This enables different products to be easily labeled in a row on the production line.

The multifunctional labeling system ALS 209 is now available. Further information about the product range, the prices and the availability can be found at: <http://www.novexx.com> or at: +49 8165 925-229 as well as info.deutschland@novexx.com
